

B1

1 1. (twice amended) An electrical connection arrangement comprising a
2 flexible multi-layer foil-like electrical conductor track element having at least one
3 connection portion electrically connected to a connection zone of an electrical
4 component, wherein walls of a housing of the electrical connection arrangement are
5 provided in the vicinity of said connection portion and said connection zone, said
6 walls being arranged such that they form, along with the electrical component, a
7 basin, said basin being open on one side only, and an originally flowable molding
8 mass is distributed in said basin such that said connection portion of the electrical
9 conductor track element and said connection zone of the electrical component are
10 completely covered by the molding mass.

32

1 10. (Amended) The electrical connection arrangement of Claim 1 wherein at
2 least one layer of said track element comprises electrically conductive tracks.

1 11. (Amended) The electrical connection arrangement of Claim 1 wherein at
2 least one layer is an electrically isolating layer.
